# Neutralised Dividend Reinvestment Plan

BKI's Dividend Reinvestment Plan (DRP) has been an effective mechanism enabling shareholders to reinvest their dividends into additional company shares without incurring brokerage fees. However, our traditional DRP has led to unintended consequences of placing additional pressure on the discount to pre-tax NTA.

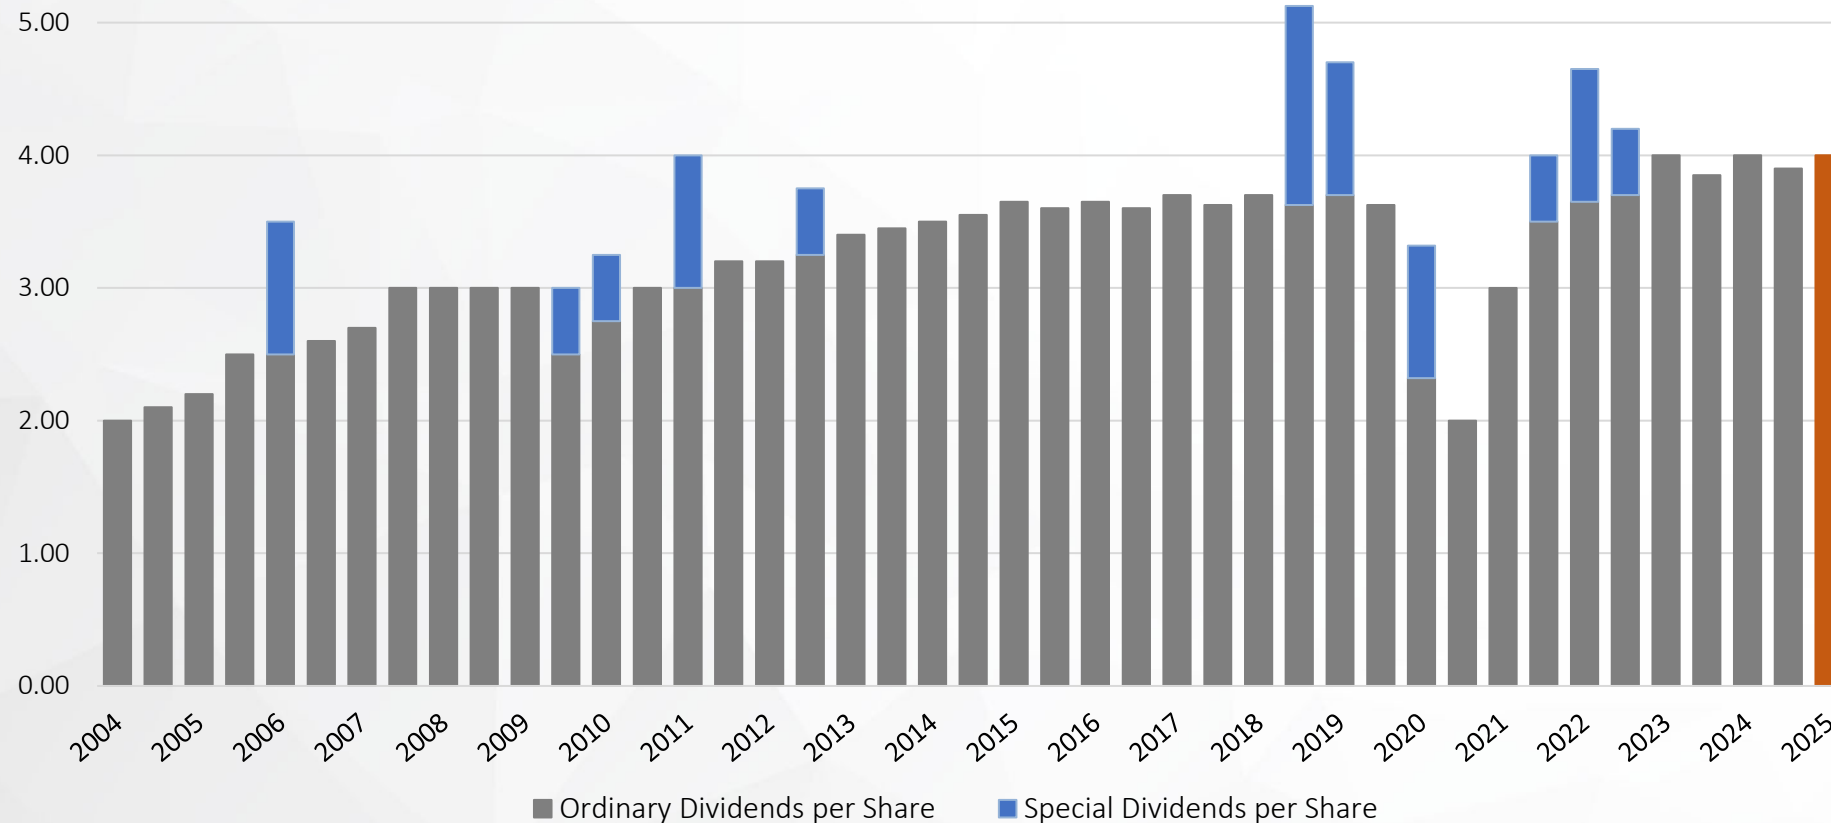

The DRP will be neutralized and addresses these concerns by ensuring BKI maintains capital neutrality, aligning with shareholder interests of reducing any discounts to NTA.

Participation in the DRP will remain voluntary, allowing shareholders to opt in or out based on their financial preferences. To preserve capital neutrality, BKI will (through a third party) execute an on-market share purchase of shares to satisfy its obligations under the DRP. Shares issued under the DRP will be priced at a nil discount to the volume-weighted average price (VWAP) over the specified trading period, encouraging shareholder participation while reflecting fair value. The purchase will be conducted at market prices, ensuring alignment with prevailing market conditions.

**BKI Investment Company Portfolio Performance** is measured by the change in pre-tax NTA and is after all operating expenses, provision and payment of both income and capital gains tax and the reinvestment of dividends, excluding franking credits.

**Vanguard Australian Shares Index ETF ( VAS-AU) Total Returns** assume that an investor purchased shares at Net Asset Value (NAV) and does not reflect the transaction costs imposed on the creation and redemptions of ETF Units, brokerage or the bid ask spread that investors pay to buy and sell ETF securities on the Australian Securities Exchange. Returns assume reinvestment of all income distributions, and do not take into account of any management cost rebates. Past performance is not an indication of future performance. Returns for periods longer than 12 months are annualized.

**iShares Core S&P/ASX 200 ETF Gross Performance** figures are calculated gross of ongoing fees and expenses. Unless otherwise stated, performance for periods greater than one year is annualised and performance calculated to the last business day of the month. Unless otherwise stated, iShares ETF net performance is calculated on a NAV price basis, while net performance for all other funds is calculated on an exit-to-exit price basis.

Past performance is not a reliable indicator of future performance. In preparing the above information, Contact Asset Management has not taken into account individual circumstances such as tax implications and it may therefore not be applicable to an individual's situation.

# Equity Market Overview

As at 30 June 2025

## Interest Rate Environment and Inflation

Inflation remains the central concern in global economic discussions influencing both policy decisions and market sentiment. Rate cuts are expected and will be a tailwind for domestically focused businesses, especially in cyclical sectors like retail, consumer services and industrials.

# Equity Market Overview

As at 30 June 2025

## Domestic Economic Resilience and Consumer Spending

Australia's economic growth is expected to improve heading into FY2026, supported by lower inflation, rising real wages, income tax cuts and solid government spending. A resilient labor market and improving consumer confidence are anticipated to lead to a gradual pickup in household consumption.

*BKI well exposed to this thematic*

Any forms of cost-of-living relief are key to supporting domestic demand. The housing market, particularly dwelling investment, is also a significant contributor to GDP.

## Global Economic Growth and Geopolitical Landscape

With the backdrop of lower inflation, we believe that the global economy is on a positive upward trajectory. However, there are risks surrounding macroeconomic headwinds including trade tensions and geopolitical uncertainties.

*BKI well exposed to this thematic*

The Australian economy is relatively sheltered from US tariff threats but segments of the market with US operations could be impacted by US trade policies. China's stimulus efforts will be crucial for the resources sector given Australia's strong commodity exposure.

## Structural Shifts and Sectoral Rotation

After a period where technology and financials (especially major banks) have dominated, there continues to be an ongoing shift in investor focus towards quality stocks – focusing on value/cyclical companies with improving earnings and dividends.

*BKI well exposed to this thematic*

Underlying drivers in structural shifts include digitalization, technology and rapid advancements in AI.
